ATTACHMENT

#### Availability of Soviet and East European Radios in Cuba

1. The data available on Soviet and East European radio receivers in use in Cuba is very fragmentary but we were able to pull together some information which may be of use to you. 25X1 Table 1 shows the only aggregate figures we have on radio
imports by Cuba. In 1966,
Poland and East Germany began exporting vacuum tube radio
receivers to Cuba. These radios were considered to be of very
poor quality and in constant need of repair. Due to a short-
age of spare parts and a lack of technical competence by the
government repair shops, it was difficult to get these radios
repaired. Table 2 shows some of the various types of East
German and Polish radios known to be in use in Cuba during the
mid-1960's. Where possible we have shown the bands each radio
was capable of receiving and the price in US dollars. It
would appear from Tables 1 and 2
that beginning in 1969 the Cubans may have begun to rely
primarily on the Soviet Union for the bulk of their radio 25X1
imports. Imports of Soviet radios in 1969 were more than
double those in 1965 and in 1972 there was another large in-
crease of 173% (over 1969).

- 2. We have no information on the types of radios which were exported by the USSR during 1965-1972. However, in 1973, Cuba contracted with the USSR for a radio and TV appliances factory to be commissioned in 1976-1977. In the initial stages, radios will be assembled from component parts supplied by the Soviet Union. In 1974, 80,000 Orbita transistor radios will be assembled in Cuba. Starting in 1975, the VEF-206 transistor radio will likewise be assembled there. The bands which these radios receive and the number of transistors and diodes which they contain are shown in Table 2. When the factory becomes operational, it will produce 300,000 transistor radios yearly, presumably including the Orbita and VEF-206 radios.
- 3. From the small sample shown in Table 2, we would estimate that most radios in Cuba can receive the medium and shortwave bands. Beginning in 1975 when the assembly of the VEF-206 is started, long wave broadcasts will also reach at least a portion of the Cuban population.
